

Software Configuration Management Plan

Configuration Items:

- Server Monitoring Web Application source code
- Use Case/Requirements documentation
- UI design files
- UML files

Version Control:

- Source code: Git & GitHub
- Files: Google Drive / Google Doc

Communication:

- Weekly meeting on Zoom
- Message tool: WhatsApp

Change Procedures:

- Team members commit their changes to either code or documentation.
- Either GitHub or Google Docs will track the modification.
- Teams will make pull requests to the main branch.
- The team leader will review and accept the pull requests to the main branch. Also, review the changes to the documentation
- The final version will be submitted as the project deliverables after the review with designated team members(Usually the member who made the changes).
